1. A software development team is under pressure to meet a tight deadline. One group wants to cut testing time to finish faster, while another insists on completing all tests to ensure quality.

Identify the cause of the conflict, explain whether it is constructive or destructive, and suggest a conflict management style to resolve it effectively.

2. Two departments in a company are competing for the same limited budget. The sales department wants it for a new marketing campaign, while the R&D department wants it for product improvement.

Discuss the cause of the conflict, explain how this situation could harm teamwork if not handled well, and recommend a suitable resolution strategy.

3. A manager changes the team's workflow without discussion. Some employees feel their ideas are not valued and refuse to cooperate.

Identify the cause of the conflict, explain the possible negative impacts on performance, and suggest how the manager could turn this into a constructive conflict.

4. In a group project, one member keeps key information to themselves to gain more credit for the work. Other members are frustrated and confront the person during a meeting.

Explain the cause of the conflict, whether the initial reaction is likely to make the conflict constructive or destructive, and propose a conflict management style that could improve collaboration.

5. In a nonprofit, some members want to focus on helping as many people as possible, while others want to focus only on high-impact cases.

Identify the cause of the conflict, describe one constructive outcome that could result from handling it well, and suggest an appropriate conflict resolution style.

6. An international project team faces tension because some members prefer direct communication, while others prefer a more indirect and formal approach.

Explain the cause of the conflict, discuss the risks of letting it escalate, and recommend steps to resolve it while respecting cultural differences.
